## What is claimed is:

5

- A process for preparing optical fiber, comprising the step of:

  drawing fiber from a preform comprising a silica body, the body formed

  by a process including the step of, prior to sintering the body, treating the

  body at a temperature ranging from 300 to 900°C with a gaseous mixture
- The process of claim 1, wherein the body is selected from an overcladding tube and a substrate tube.

comprising one or more non-oxygenated sulfur halides.

- The process of claim 2, wherein the body is formed by a sol-gel process.
- 1 4. The process of claim 1, wherein the temperature of treatment 2 ranges from 400 to 800°C.
- 5. The process of claim 4, wherein the temperature of treatment ranges from 600 to 700°C.
- 1 6. The process of claim 1, wherein the treatment is performed for a period of at least one hour.
- 7. The process of claim 6, wherein the treatment is performed for a period of at least two hours.
- 1 8. The process of claim 1, wherein the one or more sulfur halides 2 comprise one or more sulfur chlorides.
- 9. The process of claim 8, wherein the one or more sulfur chlorides comprise at least one of sulfur monochloride and sulfur dichloride.

## Mandich-Reents 6-7

1	10.\	The process of claim 1, wherein the gaseous mixture further
2	comprises a	cleast one of nitrogen, air, helium, neon, and argon.

- 1 11. The process of claim 1, wherein the one or more sulfur halides 2 are generated by reaction of sulfur present in the body with halides flowed 3 over the body.
- The process of claim 1, wherein the treatment performs at least one of: reducing the size of at least a portion of refractory metal oxide particles in the body and reducing the concentration of refractory metal oxide particles in the body.
- 1 13. The process of claim 12, wherein the particles include at least 2 one of chromia and zirconia.
- 1 14. The process of claim 1, wherein the treatment reduces the concentration of water and hydroxyl groups in the body.
- 1 15. The process of claim 1, wherein the gaseous mixture comprises 2 0.1 to 100 vol.% of the one or more sulfur halides.
  - 16. The process of claim 15, wherein the gaseous mixture comprises about 6 to about 7 vol.% of the one or more sulfur halides.
- 1 17. The process of claim 1, wherein the body is subjected to a
  2 treatment with a gas comprising chlorine prior to the treatment with the one
  3 or more sulfur halides.

1

1 12 18	The process of claim 17, wherein the gaseous mixtur
---------	---

- 2 comprising one or more sulfur halides comprises about 1 to about 2 vol.% of
- 3 the one or more sulfur halides.
- 1 19. The process of claim 17, wherein the chlorine treatment reduces the concentration of water and hydroxyl groups in the body.
- 20. The process of claim 17, wherein the chlorine treatment performs at least one: of reducing the size of at least a portion of chromia particles in the body and reducing the concentration of chromia particles in the body.
  - 21. The process of claim 1, wherein the body is subjected to treatment with a gas comprising oxygen subsequent to the treatment with the one or more sulfur halides.
  - 22. A process for preparing optical fiber, comprising the step of:
    drawing fiber from a preform comprising a sol-gel silica tube, the tube
    formed by a process including the step of, prior to sintering the tube, treating
    the tube at a temperature ranging from 300 to 900°C with a gaseous mixture
    comprising one or more non-oxygenated sulfur chlorides.
- The process of claim 22, wherein the temperature of treatment ranges from 400 to 800 °C.
- The process of claim 23, wherein the temperature of treatment ranges from about 600 to about 700°C.
- 25. The process of claim 22, wherein the treatment is performed for a period of at least two hours.

- 1 26. The process of claim 22, wherein the one or more sulfur chlorides comprise at least one of sulfur monochloride and sulfur dichloride
- The process of claim 22, wherein the one or more sulfur chlorides are generated by reaction of sulfur present in the tube with chlorine flowed over the tube.
- The process of claim 22, wherein the treatment performs at least one of: reducing the size of at least a portion of refractory metal oxide particles in the tube and reducing the concentration of refractory metal oxide particles in the tube.
- 1 29. The process of claim 22, wherein the gaseous mixture comprises 2 0.1 to 100 vol.% of the one or more sulfur chlorides.
- 1 30. The process of claim 29, wherein the gaseous mixture comprises 2 about 6 to about 7 vol.% of the one or more sulfur chlorides.
  - 31. The process of claim 22, wherein the tube is subjected to a treatment with a gas comprising chlorine prior to the treatment with the one or more sulfur chlorides.
- 1 32. The process of claim 22, wherein the tube is subjected to 2 treatment with a gas comprising oxygen subsequent to the treatment with 3 the one or more sulfur chlorides.
- 1 33. The process of claim 22, where the tube is selected from an overcladding tube and a substrate tub.
